

From Potential to Solution

~ How Companies Can Effectively Leverage Generative AI

Generative AI is more than just a technological trend. When applied strategically, it helps organizations make better use of knowledge, make more informed decisions, and automate processes with precision.

The key to success lies in identifying and implementing the right use cases where technology serves a clear business purpose rather than being an end in itself.

Where Generative AI Creates Business Impact

Drawing on experience from more than 30 GenAI projects, we know that real value emerges where technology enables measurable business outcomes.

Typical applications include:

Knowledge Bots

Unlock knowledge by contextualizing information from documents, emails, or reports.

Result: Faster orientation and more informed decisions.

Automating Routine Tasks

Automate standardized, text-based workflows.

Result: Employees can focus on creative or higher-value activities.

Code Generation

Boost productivity through assisted or automated coding, efficient for experts, accessible for beginners.

Result: Faster development and lower entry barriers.

Automating Code Migration

Modernize IT systems by migrating legacy code automatically, without full redevelopment.

Result: Reduced risk and a future-ready IT landscape.

Assistance & Agents

Accelerate decision-making with AI-supported analyses, forecasts, and text suggestions.

Result: Faster, data-driven decisions.

Typical Outcomes from HMS Projects

Companies working with HMS achieve measurable efficiency gains in a short time, without compromising security or compliance:

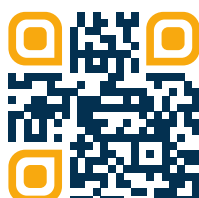

- ✓ **100%** Client Recommendation Rate
- ✓ **100%** Goal Achievement According to Client Feedback
- ✓ **96%** rate our project management as excellent or good.
- ✓ **96%** praise our technological expertise

Our Four-Step Approach

We follow a proven four-step model: From initial idea to sustainable scaling in production:

Want to explore concrete use cases, project experience, and client references?
Visit our website for detailed insights, use cases and results across different industries.

Why HMS Is the Right Implementation Partner

- ✓ 30+ productive GenAI projects
- ✓ 4000+ project days of experience
- ✓ Deep expertise in regulated industries (Pharma, Insurance, Finance)
- ✓ Strong partner network: AWS, Databricks, Dataiku, dbt, Microsoft, Palantir, Snowflake, Stackit

Take the Next Step

Book your 30-minute GenAI Check!

Get an initial assessment of which of your processes offer the greatest potential for measurable AI impact.
