

Your Context Engine for AI

Actian Data Intelligence

Poor data is derailing AI in 3 in 4 businesses. — AI Readiness Report 2025*

The Challenge

AI is Scaling Decisions and Bad Data

Enterprise teams face an impossible gap: AI demands trusted, governed, usable data at machine speed — but data infrastructure was built for humans.

- AI moves faster than teams can manage
- Accountability stays with the humans
- Manual data prep can't keep pace
- Siloed tools leave governance gaps

Why Actian is Different

We Turn Enterprise Context into Operational AI

Enterprise teams face an impossible gap: AI demands trusted, governed, usable data at machine speed — but data infrastructure was built for humans.

- **Knowledge graph + lineage** gives AI structured awareness of every data asset — ownership, definitions, dependencies, and policies
- **Semantic search** delivers certified, governed insights in under a minute
- **Observability** that doesn't just alert — it identifies exactly which data contract broke, what it affected, and prevents it from happening again

The 3 Pillars of Operational AI

Context

The Semantic Foundation

Every data asset gets a semantic identity — what it means, where it came from, who owns it, what policies govern it. Without this: AI guesses.

Trust

The Observability Layer

Monitors every pipeline in real time. When something breaks, AI knows exactly which data contract was violated and what downstream models or reports are now compromised. Without this: AI acts on broken data.

Access

The Activation Layer

Business users ask questions in plain English and get governed, consistent answers — built on the context and quality the first two layers establish. Without this: insights stay locked with analysts.

Top Use Cases for Enterprise Data & AI Leaders

AI-Ready Data & Agentic Automation Context

Transform raw enterprise data into AI-ready assets with automated quality scoring and contextual intelligence.

Data Democratization

Enable business users to get trusted, instant answers in plain English – built on a governed semantic foundation.

Governance by Design

Automate compliance monitoring and policy enforcement with AI agents. Continuous compliance, not audit panic.

Trusted by Data and AI Leaders Worldwide

Groupe BPCE | Banking

"Unlike Collibra, Actian connects instantly to our data sources without third-party tools. The TCO proved far more cost-effective."

- 80,000 glossary definitions
- 30 connected platforms
- 1,000+ weekly users

GEMA | Music Rights Licensing

"To decentralize data ownership in our organization, Actian wasn't just a helpful tool; it was a key foundation. Its clean, intuitive interface made it easy for users to find data products, understand their sources and visualizations, and know exactly who to contact with questions."

- 140% ROI
- 15 months payback period
- Reduced time wasted preparing data

About Actian

Actian empowers enterprises to confidently manage and govern data at scale. Organizations trust Actian data management and data intelligence solutions to streamline complex data environments and accelerate the delivery of AI-ready data. Designed to be flexible, Actian solutions integrate seamlessly and perform reliably across on-premises, cloud and hybrid environments. Learn more about Actian, The data and AI division of HCLSoftware, at actian.com.
