

# APOLLO SAP Connector – the easiest way to connect two worlds

The APOLLO SAP Connector: seamless, flexible, fast.

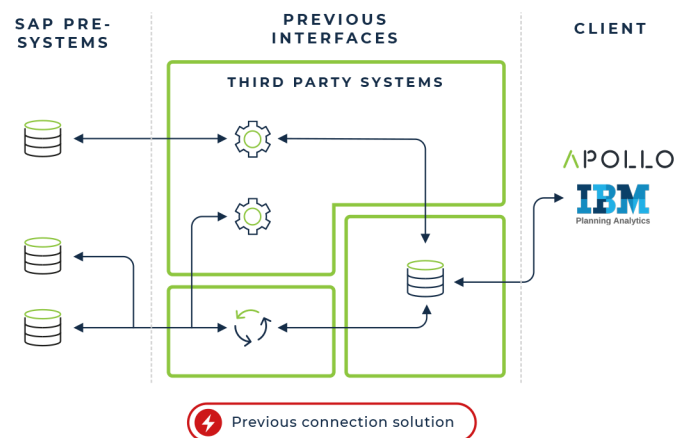

The high-performance interface solution for a bi-directional connection of your IBM Planning Analytics with Watson universe to your SAP (BW and ERP) system for immediate use.

With the APOLLO SAP Connector, rocket science becomes easy.

## The Mission

Two, three or more pre-systems within a company are not unusual nowadays. What was meant to be a relief now represents an enormous challenge for many companies. In addition to the respective system integration, complex and expensive interfaces often have to be implemented for regular data exchange. Frequent misfires eventually lead to startup failure.

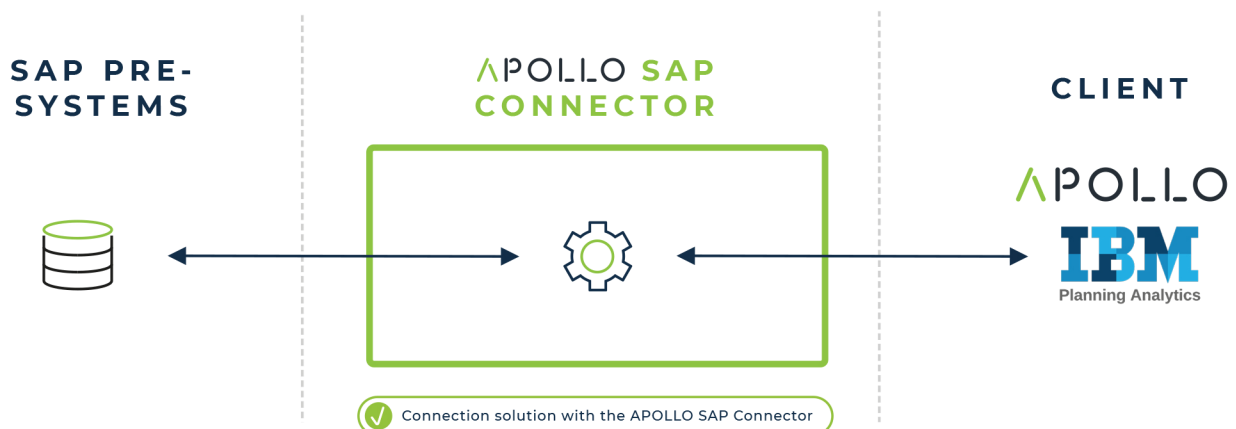

Often SAP (e.g. S/4 Hana) is the central ERP system of the company. In a planning solution, it is important that the planning system and the ERP system are aligned with each other. Data should be displayed uniformly in both systems, whereby data maintenance should only take place in one system. A transparent solution that guarantees a stable and easy-to-use transfer of data is a top priority for the user.

## With rocket thrust into the next galaxy

With the APOLLO SAP Connector, you can easily establish a direct, read/write connection between your IBM Planning Analytics with Watson system and your SAP BW or SAP ERP. The data is picked up directly from the SAP system to your IBM Planning Analytics with Watson environment via a standard interface and can be further processed there, e.g. as part of the annual planning process. With the APOLLO SAP Connector, you can transfer the data quickly and easily back into your SAP system after your planning has been completed.

The solution ensures data consistency between IBM Planning Analytics with Watson and SAP via predefined and configurable transformations. The APOLLO SAP Connector uses the modern standard interface technology OData to query SAP data. This guarantees a direct, secure and future-proof data connection for your sensitive data (e.g. HR data). The data transfer is carried out with high performance and ensures that the user can continue to do his work without being affected by a regular and automated integration of both systems.

## Get on board and take off

With the APOLLO SAP Connector, you get a best practice, ready-to-use interface technology for SAP and IBM Planning Analytics with Watson with ready-made transformation logics that make it easy for you to synchronize between two worlds.

With our solution, you can make the leap into new spheres effortlessly and at the speed of light – direct your gaze towards the future today.

- **simple and fast setup**
- **flexible application**
- **seamless integration on both sides**
- **robust and fail-safe**
- **encrypted**
- **user-friendly**
- **future-proof thanks to modern technology**

Many of our customers already rely on the APOLLO SAP Connector – we will be happy to advise you and offer you the best possible solution for your project. Please contact us!
